# Comprehensive Analytics Empower Educators to Use Data Effectively

Videri™ provides comprehensive, real-time data visualization to gain insights and make informed decisions in the classroom and at the school and district level.

Educators Use Data to Improve Student Outcomes

Districts capture a broad range of data about students and assessments. Educators want to get more useful information from that data so they can plan effective interventions and improve student outcomes.
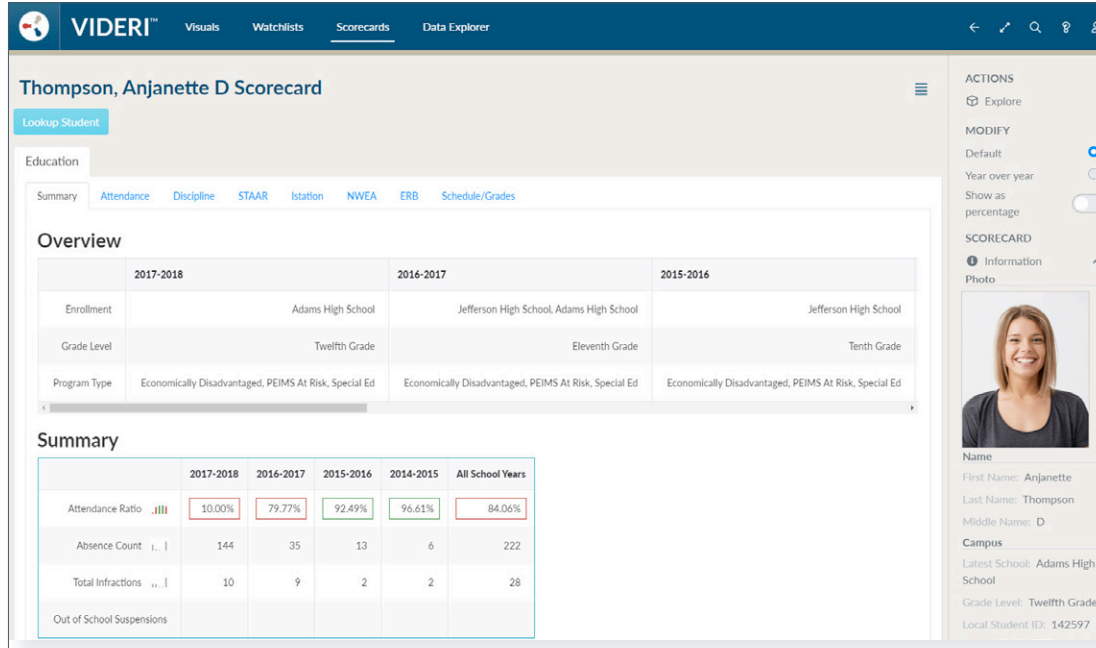

Videri offers teachers hundreds of visualizations they can add to dashboards to explore their students' data, identify patterns and trends, and take action early.

Videri Charts and Dashboards can be easy customized by teachers and coaches, eliminating the reliance on IT to create reports.
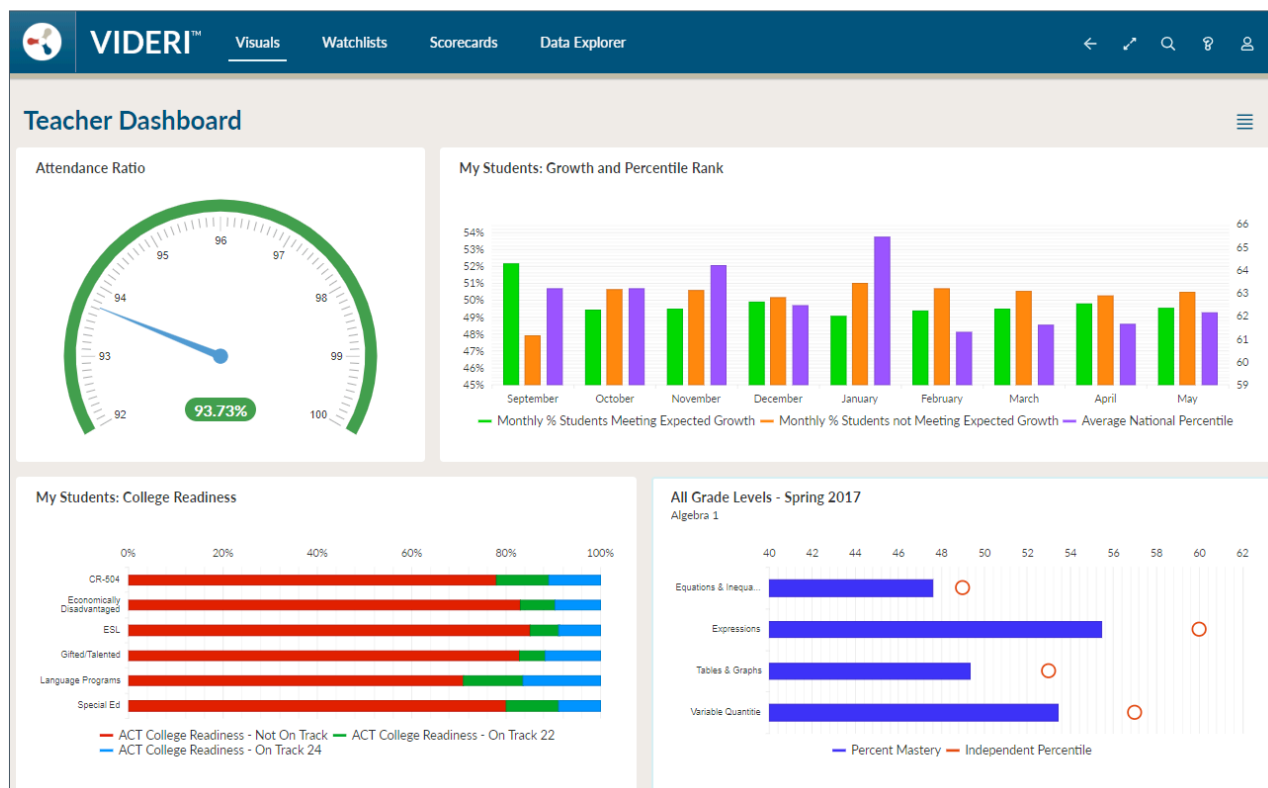

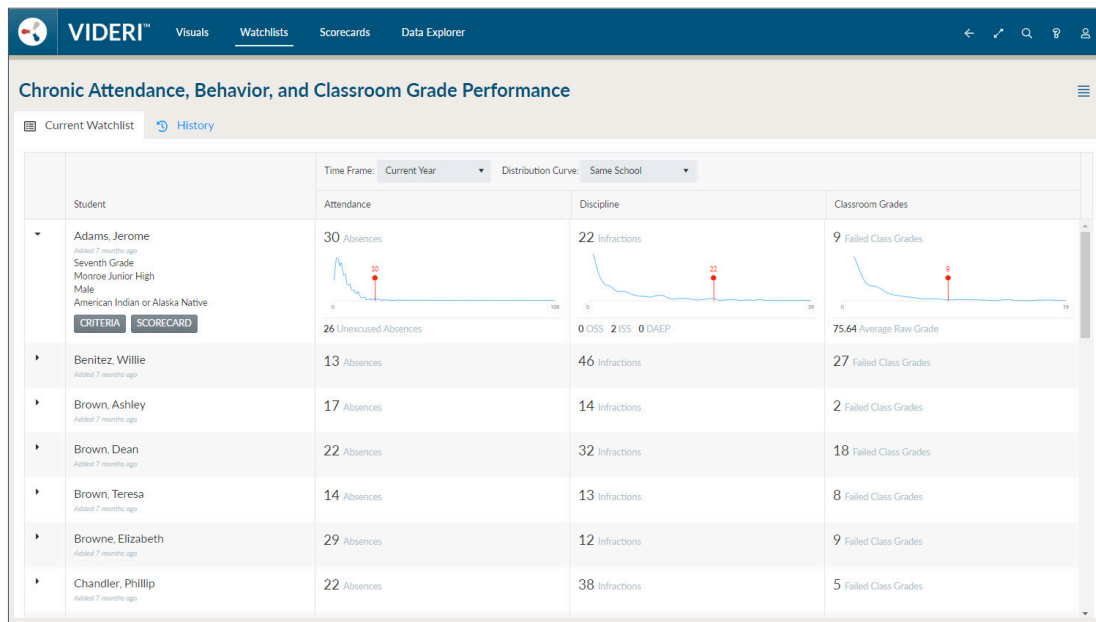

Educators need access to detailed information about the individual students they teach—including historical data.

Videri Student Scorecards bring together student data from across the district—in one place—including contact information, classes, grades, assessment scores, discipline, attendance, and more.

Educators and school administrators want to use data to target intervention strategies, gauge progress, and monitor students' graduation readiness.

Videri Watch Lists let educators define criteria and monitor changes in real- time.

School administrators want to view and compare data across classrooms to guide teachers and target strategies that promote student success.

Videri makes it easy for principals to configure and share charts and dashboards with staff so they can zero- in on areas of need and define effective interventions.
