

# Certify

*“Having Certify is like having a team of people comparing hundreds of data points every night. It not only saves us time, but money as well.”*

What if you could easily identify and track data discrepancies, policy issues and patterns of non-compliance before issues result in bigger problems?

The Certify™ data quality solution gives school districts the ability to easily detect, track and report data problems, policy issues and patterns of non-compliance that may require attention or remediation – before issues result in bigger problems, such as audits, penalties and funding losses.

Certify automatically reads your district’s databases each night and sends secure email alerts to notify your team about issues that need to be resolved and rectified – such as missing, incomplete or inaccurate data. Team members can then access and review effected student records immediately and securely, and take immediate action to make corrections directly in your information systems.

California districts have access to three comprehensive “rule libraries” that contain data validations and alerts:

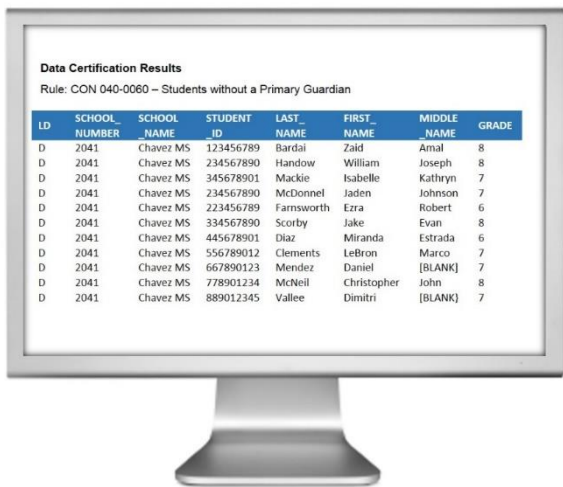

**The Certify Rule Library™**, a collection of high impact validations and alerts in the areas of student demographics, special programs, enrollment, discipline, and attendance – that automatically identify data issues and trends.

**The CertifyCALPADS Rule Library™**, an up-to-date collection of CALPADS validations that are available year-round, on demand, for immediate data validation of CALPADS submission files.

**The CertifySEIS Rule Library™** is a set of validations and alerts that help California districts easily reconcile cross-system data discrepancies related to their special education population.

Certify enables districts to:

- Rely on accurate and complete data for informed decision-making and mandated reporting
- Proactively monitor data that may indicate a lack of compliance with state or district policies
- Increase productivity and efficiency by streamlining the process of data error detection, review and correction
- Minimize audits related to paybacks and/or penalties
- Establish a solid foundation for district data initiatives that support broader data access, accountability and visibility
