

Videri

The education analytics solution that unlocks *all* your data.

Educators want more useful information from district data. Your district captures data about students, assessments, teachers and funding – but how much of that data is helpful? How much is usable? Are you getting the full picture of each student? Is your data helping you to communicate with students, parents and teachers? Where should you make changes or interventions?

Videri™ is the analytics solution that makes it easy for districts to put the right information in the hands of teachers, administrators and parents.

WHAT MAKES VIDERI DIFFERENT?

Simply-designed dashboards that can be configured for your district's needs and give you all the insights you're looking for

Dynamic watchlists that bring together important student data, like attendance and behavior—as well as assessment scores, credits and grades—so teachers and counselors can act quickly

Easy ability to filter, categorize, drill down and analyze data across the district—to get the information that you really need

The Power is in the Data

Videri is the only analytics solution that is connected to an interoperability platform.

What does that mean and why is it important?

An interoperability platform gives your district an easy “plug-and-play” ability to bring multiple sources of data together seamlessly. With an interoperability platform, your district can integrate data from your student information system, multiple assessments including state assessments, and information stored in special ed systems, behavior management systems, gradebooks and even classroom teaching tools.

Videri doesn't offer dozens of costly data connectors. Instead, Videri integrates the data you need to give you rich and flexible analytics—without leaving important information behind.

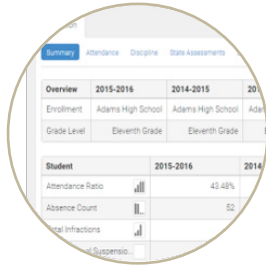

Hundreds of “out-of-the box” charts makes it easy for any district to get started

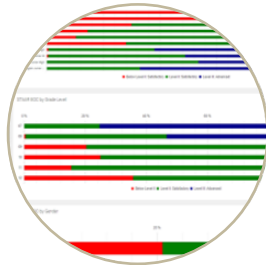

Key performance indicators (KPIs) that are easy to set up and track

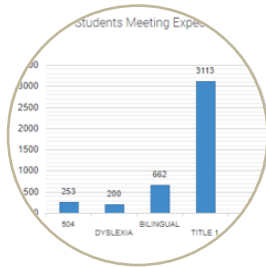

WHAT CAN YOUR DISTRICT DO WITH VIDERI?

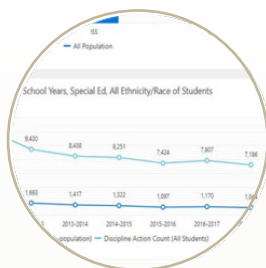

Receive watchlist notifications with student history

Report assessments by grade level, gender, program, subject or ethnicity

View students meeting expected growth levels by program type

Track trends in behavior to ensure discipline actions are not disproportional across programs or sub-populations
